

BEFORE YOU BEGIN

- Your peel & stick accent works best on a smooth, clean, dry, painted, flat surface. Textured, glossy, or metallic-painted walls will not allow for good adhesion.
- Larger accents may require help. Ask a friend to give you a hand.
- Do not apply your peel & stick accent on or near extreme heat sources such as lights or lamps.
- Dust, dirt, moisture, and oils from your hands will diminish the life of the adhesive, so we do not recommend frequent removal and replacement.
- **REMEMBER THIS:** Self-adhesive materials like the first thing they meet! If that happens to be a dirty surface, they'll stick to the dirt, resulting in a weak bond. If it's a clean wall, they'll stick to the wall, and you'll be far happier with the outcome. In short, make sure your walls are clean before you apply your peel & stick accent!

APPLICATION

1) Wipe your wall removing all dust and obvious contaminants. Lay your peel & stick accent face down on a flat surface. Pull back approximately six inches of the release liner and put a sharp crease in it. Be careful not to crease the face of the accent. For accents that come in two or more vertically stacked pieces, we recommend that you start with the bottom piece.

2) Align the accent on the wall and use finger pressure to tack it in place. Using the burnishing tool (included), press the accent into place, moving from the center out toward the right. Return to the center and move outward to the left.

3) Pull the liner down a few more inches and continue to press the accent in place as described in Step 2. Repeat this process until you reach the bottom of the accent. If there are multiple pieces to the accent, repeat these steps, taking care to match the pattern at the seam. There will be a slight overlap at the seam.

CARE & REMOVAL

Clean your peel & stick accent with a damp cloth. Do not use household cleaners. To remove or reposition the accent, start from one corner and carefully peel the accent away from the wall. Move slowly and use gentle, even pressure.
